

SUNTEC SIMPLIFIES YOUR PUMP CHOICE!

Starting from 2021, the **entire residential pump range** will be compatible to main fuel types, such as fuel #2, light oil, kerosene **and New biodiesel blend up to 20% (B20)* !**

New pumps compatible to B20 blends are identified with a “B” as below:

A2VA-3006**B**

A2VA-7116**B**

A1YD-7154**B**

B2TC-8931**B**

...

In-house tests have been performed by SUNTEC, followed by joined lab tests with NORA (National Oilheat Research Alliance) to qualify pumps, and to identify technical challenges:

- **High quality level** : as FAME** Biodiesel is more aggressive than standard #2 fuel, SUNTEC qualified new materials with better chemicals resistance and improved stability against oxidation. Between 10% and 20% of the pump components have been replaced to be compatible with B20.
- **No impact on lifetime** : as FAME** Biodiesel have a good lubricity power, Suntec ensures a good internal gear set behavior over the life time of pumps and keep a 36 months warranty period on new B20 pumps***

Forward-looking, Suntec strives to meet the first step of providence resolution of B20 before 2023, and keep working on higher Biodiesel content compatibility to reach the net-zero CO2 emission commitment by 2050.

SUNTEC wants to offer to users a clear guideline on how easy it is to reduce carbon foot print by upgrading heating systems to low carbon fuels.

*Pending on UL B6-B20 certification

** FAME: Fatty Acids Methyl Ester
